Domino's-Style Loyalty Launch Checklist

Joy.

Free Checklist · joy.so

How to use this checklist: Work through each section in order before launching or relaunching your loyalty program. Check items off as you complete them. Every item maps directly to the Domino's framework in the article above.

SECTION 1 OF 3

Before You Launch: Foundation

- [ ] Calculate your median time between purchases
  Target: under 90 days. If median exceeds 6 months, a points program will underperform. Use a referral model instead.
- [ ] Confirm organic repeat buyers already exist before adding points
  Loyalty amplifies what already works. It doesn't fix broken product-market fit.
- [ ] Verify your post-purchase email sequence is live: thank you, how-to-use, reorder reminder
  Gartner: 1 in 3 loyalty members are inactive because the initial brand experience didn't stick.
- [ ] Set up a non-member control group before launch day
  You need this to calculate Incremental Repeat Purchase Rate (IRPR). Without it, you can't prove the program is working.

1/3 of loyalty program members are inactive because the initial brand experience failed to stick (Gartner). Fix the foundation first.

SECTION 2 OF 3

Design the Program: The Three Levers

- [ ] Set your earn floor at or below your average first-order value
  Domino's lowered theirs from $10 to $5, doubling eligible transactions. If your AOV is $30, try a $15 threshold.
- [ ] Create a forward-commitment reward valid only on the next purchase within 30–45 days
  "Emergency Pizza" logic: the reward guarantees a second visit. A time-limited Return Credit works the same way.
- [ ] Tie at least one earn trigger to a specific behavior, not any spend
  Options: second purchase within 30 days, cross-category order, verified review. Conditional rewards pay for new behavior, not existing demand.

- [ ] Define your tier status benefits beyond points: Free Shipping for Life, Early Access, private community

  Bond Brand Loyalty: 79% of consumers are more likely to stay with a brand when rewards feel "exclusive."

Measure What Matters & Next Steps

Joy.

SECTION 3 OF 3

Measurement Setup: The 4 Metrics

- [ ] Track Incremental Repeat Purchase Rate (IRPR) monthly: members vs. control group
  If buying behavior doesn't differ, your program is subsidizing customers who would've bought anyway.
- [ ] Calculate Cost Per Retained Customer (CPRC): total rewards cost divided by customers retained by the program
  Benchmark: CPRC must stay below your paid customer acquisition cost. Shopify research puts CAC at 5–25x retention cost.
- [ ] Measure Assisted Orders separately: orders placed using loyalty-generated codes or referral links
  This is the direct revenue measure of program ROI. Total member count is not.
- [ ] Monitor your redemption rate among active members monthly
  Target: 15–25%. Below 10% = threshold too high or rewards undesirable. Above 40% = margin risk.

5% increase in customer retention can boost profits by more than 25% (Bain & Company). That's the compounding you're building toward.

QUICK REFERENCE

Key benchmarks to remember

15–25%
Target redemption rate among active members

<90 days
Max repeat cycle for loyalty to compound effectively

5–25×
How much more expensive new customers are vs. retained

2M
New Domino's members from 3 structural changes, not ad spend

Ready to configure this in Joy Loyalty?

Set earn floors, behavioral triggers, and tier benefits in one platform. No developer needed.
